

In today's professional office environment, you need to use the right tools that completely eliminate productivity loss and make you more efficient. Frisbee® Pro, an all-in-one intelligent dictation and workflow management solution which supports all major digital dictation devices, is the ideal solution for you. With Frisbee Pro, physicians, lawyers and all other professionals can better organize their time and work in more productive ways.

Frisbee Pro's workflow management and optional fully integrated speech recognition makes it convenient and easy to use. Its ability to support multiple complex workflows enables the solution to be used either on a departmental level by single users or on a company-wide level. With an intuitive interface, a wide range of input device capabilities and an integrated speech recognition feature, employees are able to be more flexible and productive.

Who uses Frisbee Pro?

Frisbee Pro can be used in a single author/single transcriptionist environment or in larger enterprises with multiple authors and transcriptionists. The author is a professional who is busy dictating information about customers or patients using the input device of their choice: Smartphone, portable device or dictation microphone. The dictations are placed in shared folders on the local network or emailed which give the author the capability to automatically track the dictations instantly. The transcriptionist(s) can then retrieve the dictations, transcribe them, and send the transcribed document back to the author (quickly) all within the secure application.

Easy dictation creation and distribution

Frisbee Pro gives the author and the transcriber « real time » interactive feedback during the entire process. The unique feature like the « Job Lister » simplifies the organization of voice files by displaying the dictation length, priority, affiliation, among other important items. Furthermore, the processing status such as « dictated », « in progress », « recognized », « transcribed » can be displayed and viewed by the author and/or transcriptionist at any time.

Frisbee Transcription

Within the Frisbee « Job Lister », transcriptionists now have a comprehensive view of all work, clearly listed within a multifunction display for simplified voice file management. It's easy to identify individual voice files, locate author priorities and organize dictation. To further simplify transcription, Frisbee can also automatically launch the desired text processing software and template designated for each voice file's workflow. Once the transcription is completed, the status of the job is automatically updated to « transcribed », so when the dictating author logs on, the completed text file is now available and ready for approval. Frisbee Pro supports the .dss, .wav, .mp3 and .amr audio formats.

Frisbee Pro enables professionals to organize their time more effectively and to work in more productive ways.

BENEFITS

- ◆ Increased efficiency
- ◆ Better workflow management
- ◆ Improved document turnaround time
- ◆ Flexible dictation device options
- ◆ Ability to monitor status of your work
- ◆ Optional Speech Recognition
- ◆ Ease of use
- ◆ Fast Return on Investment

Frisbee Smart Integration within Frisbee Pro

For the professionals with a need of mobility and willing to use their iPhone, iPad or iPod, Frisbee Smart is your mobile dictation. Users can choose to send their encrypted and password protected dictations via e-mail or to an FTP server. Frisbee Smart allows you to dictate on the move, from anytime or anywhere!

Speech recognition for faster transcription

Frisbee is especially useful for physicians, lawyers, field reporters and other business professionals familiar with the benefits of using speech recognition software. The integration of speech recognition within Frisbee will save hours of transcription time with a one-time investment. The speech recognition module can be added initially or at any point in time as your organization changes in size, structure, location, etc. This will enable users to fully maximize the time saving features of Frisbee Pro and speech recognition software like Dragon Naturally Speaking Professional.

Frisbee and Dragon provide you with more than just an interface between professional dictation management software and voice recognition. You can dictate with either a portable dictation device or handheld microphone into Frisbee and choose whether you want to speech-recognize yourself or have the secretary do it. This improves your speech profile continuously. Integrated into Frisbee Workflow, the suitable template is automatically selected for each dictation and the recognized text is merged in.

Fast return on investment

By automating the flow of dictation and document creation using Frisbee Pro, professionals can spend more time with their customers, client and/or patients while being more productive in a way that can generate a fast Return on Investment (ROI). Cost savings are attributed to increased transcription productivity, improved turnaround time and the ability to use existing smartphones as a dictation device.

Hardware-independent solution

Choosing a dictation system suited to your needs is essential for increasing efficiency in your workflow. Frisbee Pro is a hardware-independent solution, meaning that you are free to use any professional dictation device of your choice from leading brands like Olympus, Philips or Grundig.

Key features

Free choice of portable devices – Frisbee Pro allows the user to choose a portable dictation device and/or microphone that they prefer from the leading manufacturers.

Supports mobile dictation – Frisbee Pro is fully integrated with Frisbee Smart. This functions with the same ease of a professional digital voice recorder and is ideal for anyone who dictates while « on the go » with their mobile phone.

Workflow management – Both sides are informed by the Frisbee application of the status of their work at all times providing a unique workflow functionality between the author and the transcriber! Once the document is transcribed, it can be sent via e-mail or saved in a shared folder.

Speech recognition – With this fully integrated feature, you can choose whether you want to use speech recognition yourself or have your transcriptionist do it using Frisbee.

Modularity – The solution can be used on single workstation basis or can be extended, as the company or need grows, to Frisbee Enterprise, the server-based solution.
