

In today's ever changing environment, Frisbee® Smart allows physicians, lawyers, politicians, journalists and many others to access their core business applications while being 100% mobile. Maintaining access to your core business applications through our flexible mobile application allows you to get things done faster, easier, more cost effective and without restrictions. Frisbee Smart works with multiple devices such as iPhone®, iPad® or iPod touch®.

Professional iPhone users can now take full advantage of a digital dictation workflow system while on the go. me2me's Frisbee Smart application enables users to record and send audio files using one of the many simple data transfer sources, such as WIFI connections, through the office or other places. This allows the turnaround time to be shortened, productivity is increased and allows the client to reduce cost and be more mobile. Our easy to use functionalities provide professionals the capabilities of using the mobile device the same way they utilized their traditional digital dictation device including record, playback, pause, stop, rewind, fast-forward, review, overwrite and insert. Frisbee Smart solution is the only easy to use solution that is available in multiple languages and secures your client data.

Secure Data Transfer

The Frisbee Smart application has a distinct way of functioning that saves time, is efficient and extremely reliable. It records the dictation, compresses it, and sends it to the transcriptionist. Users can choose to send the secure files to one or several e-mail addresses or to a FTP server. They are always encrypted and password protected which ensures that the confidentiality is never lost or endangered. Our compression method is done by transferring voice files without losing quality (e.g. 8 kHz /1 min = 98 Kb) while maintaining the original quality file on your iPhone.

Frisbee Smart Integration with your digital dictation system or EMR

Frisbee Smart utilizes the **Frisbee Converter** to integrate directly into Frisbee Pro 2.0 and Frisbee Enterprise Solution. Frisbee Smart's unique capability allows professionals, who wish to dictate using their iPhone into another digital dictation management solution, to easily do so! An example of how the Frisbee Smart's technology can be used to your benefit is to integrate it directly with your EMR system or any other vertical system. This allows you to realize new opportunities and integration possibilities with your own system and increase the productivity within your organization.

The Frisbee Smart application turns your iPhone into a professional digital dictation device. Record, edit and send the audio files via e-mail or to an FTP server very easily.

BENEFITS

- ◆ Dictate from anywhere at anytime
- ◆ Increased productivity
- ◆ Improved document turnaround time
- ◆ Works with iPhone®, iPad® or iPod® touch
- ◆ Multilingual
- ◆ Compatible with Olympus, Philips or Grundig to name a few of the digital dictation solutions

Key features

Voice Activation for hands-free dictation –

Recordings can start as soon as the application is launched and the input level can be adjusted instantly, preset, and saved.

Bluetooth™ headset compatible – Dictate using your Bluetooth headset which allows free movement.

File Size Control – The “auto stop function” stops the recording when the configured size is reached in order not to exceed the maximum file size of the receiving mailbox.

Easy to use – All functionalities you already know and are comfortable with from other dictation devices such as record, playback, pause, stop, rewind, fast-forward, reviewing, overwrite and insert.

New file folders – File “folder organization” follows the normal rules like draft, finished, and sent. The dictations are stored in safe and accepted methods that include name, size, date and time.

Compatible with other digital dictation solutions

Frisbee Smart 2.0 can also be used by any professional user who wants to dictate with the iPhone but works with another digital dictation solution. Frisbee Converter will help you to convert your audio file into the correct audio format of your respective digital dictation software. Some compatible solutions are: Sony Digital Voice Editor, Philips SpeechExec Pro or Enterprise, Olympus DSS Player Standard or Pro, Grundig DigtaSoft or DigtaSoft Pro, DictaNet Workflow Manager and many others.

Some functions that Frisbee Converter offers are:

- Automatic service: checks for dictations which have been sent from Frisbee Smart via e-mail, encrypted e-mail or FTP.
- Dictations made with Frisbee Smart are automatically and immediately made available for the configured transcription software.

Barcode Reader

Frisbee Smart 2.0 allows you to utilize your iPhone/iPad/ iPod as a wireless barcode scanner. Simply scan the barcode with the integrated camera and the barcode is automatically assigned to the opened dictation. Our system supports barcodes standards such as: EAN-13, UPC-A, UPC-E, EAN-8, Code 128, Code 39, Interleaved 2 of 5, PDF-417 and QR Code.

Recording qualities

Four recording qualities, all optimized for speech recognition, are available: 8 kHz, 10.025 kHz, 22.05 kHz and 44.1 kHz (broadcast CD quality).

iOS Models Supported

- iPhone® 3GS • iPhone® 4 • iPod® touch (4th generation)
- iPad® 1 • iPad® 2

Requires iOS 3.2 or later
