

# Frisbee® Transcription Set

## Key benefits of the Frisbee Transcription:

### Complete Transcription Control:

Within the Frisbee "Job Lister", transcriptionists now have a comprehensive view of all work, clearly listed within a multifunction display for simplified voice file management and control via an easy-to-use point-and-click driven user interface. It's easy to identify individual voice files, locate author priorities and organize dictation.

### Know Where You Are And What's Ahead

Once a voice file is selected for playback, with a simple mouse click or touch of the foot control, a "Tracker Bar" within the Frisbee display window visually indicates the location of important cues, total dictation length and current position in the voice file during playback. To further simplify transcription, Frisbee will automatically launch the desired text processing software and template designated for each voice file's workflow. Once transcription is complete, Frisbee automatically updates the status of the job to "transcribed", so when the dictating author logs on, the completed text file is now available and ready for approving.

In the case of using Frisbee SR (Speech Recognition), the dictation is highlighted as "recognized", meaning already transcribed. The transcriptionist can now review and correct it by listening to the original voice file in parallel. They can then print this directly or send it to the author again for correction in accordance with the usual procedure.

### Hardware Functions:

- USB Foot control with configurable buttons
- USB Stereo Headset with integrated Sound card and volume control

### Package contents:

- USB Foot control
- USB Headset
- FRISBEE Pro Dictation Management Software
